

Suffering from Acid Reflux?

If you suffer from severe gastroesophageal reflux disorder, commonly referred to as GERD, a new, minimally invasive procedure is available. LINX is a quarter-sized device that prevents stomach acid from entering your esophagus, and Park Plaza Hospital is one of the few facilities offering this new solution.

To Request an Appointment

GERD Surgery

Many adults suffer from gastroesophageal reflux disorder, commonly referred to as GERD. GERD, a condition where stomach acids reflux or "back up" from the stomach into the esophagus, can cause a variety of symptoms including heart burn, chest pain and indigestion. Park Plaza offers highly skilled gastroenterologists and advanced gastrointestinal treatment options to help you find relief.

Advanced Procedures

The LINX® System is a small implant comprised of interlinked titanium beads. The device is implanted with a standard minimally invasive laparoscopic procedure. Park Plaza Hospital is one of the few facilities offering this new solution to control reflux and heart burn symptoms.

Benefits of LINX

- Improved heartburn and regurgitation symptoms
- Decreased reliance on reflux medications
- Minimally invasive procedure

With specially trained clinical staff and advanced equipment, we provide our community with quality gastroenterology services close to home.
